

DeploymentPro

Manage Outlook configuration on end-user desktops directly from your web browser. Eliminate the need to visit every desktop and device—no experience or training required.

When you're migrating customers to Office 365, the Outlook configuration process can cause potential roadblocks. End-user experience is often poor if they need to configure mailboxes themselves, generating a flood of support tickets. BitTitan DeploymentPro accelerates the entire onboarding process and helps you increase your margin for the project.

Configure Outlook Remotely

Using DeploymentPro you can manage all desktops directly from your web browser.

With the power of the cloud combined with automation, DeploymentPro eliminates the need for you to visit every device physically or have remote sessions with employees. DeploymentPro is a cost-effective way to configure desktops regardless of size, version, geographic location, or status.

- Launch DeploymentPro from within the MSPComplete® platform
- Choose from several easy ways to deploy the Device Management Agent
- Check health of hardware and software remotely
- Create Microsoft Outlook profiles for Office 365
- Configure and track desktops remotely from a web interface
- Customize end-user communications
- Get questions answered fast with 24/7 technical support

Why go with DeploymentPro

Easy to Use

After you set your parameters and preferences through the Device Management Agent in MSPComplete, the built-in wizard does all the work for the end users without the need for any admin credentials. No training or expertise needed.

Customizable

Customize the wizard with your own logo and tagline. You can also customize automated emails to end users so you don't have to individually notify each user on when to update or when the configuration finishes.

Scalable

DeploymentPro works for small businesses as well as it works for enterprise-level clients. Regardless of a company's size, DeploymentPro can automate the desktop configuration.

Hassle-Free

You have the option to install the agent silently via Group Policy, so there's nothing for end users to install or manage. End users simply enter their password and restart Outlook.

Flexible

DeploymentPro is versatile enough to function in any deployment scenario, including tenant-to-tenant (O365 to O365), "big bang," or coexistence migrations.

Project Management

Track exactly what's going on in real time. Check reporting, review project errors, see who has or hasn't installed the agent, monitor batch deployment, and set Group Policy. There's no longer any need to touch an employee's desktop to configure or deploy—ideal for companies with a remote or dispersed workforce.

Cost-Effective

Lowers total project costs through automation, and doesn't create any expensive downtime for end users. Through the comprehensive web-based portal, you can manage and optimize the entire Outlook configuration, saving time and increasing your margin for the project.

Configure

Show us the desktops to manage and the operations to perform.

Deploy

Deploy our light agent to each desktop using one of several supported methods.

Monitor

Monitor the status of the agents directly from MSPComplete.
