

HealthCheck for Azure and Microsoft Assessment and Planning (MAP) Toolkit

To thrive in a competitive cloud services market, it is important to expand your services and revenue streams by upselling and cross-selling Microsoft's big cloud infrastructure platform, Azure. With Microsoft's Assessment and Planning (MAP) toolkit you are able to assess your customer's networks environment by gathering inventory and performance information, to know if that customer is ready for a migration. However, being a free tool, it does not offer the in depth reporting that BitTitan's Healthcheck for Azure offers.

BitTitan's Healthcheck for Azure is the industry leading tool that provides you with detailed reporting, cost analysis, and tools to convince your customers to make the switch to Azure.

HealthCheck for Azure

- Scan on-premises virtual machines
- Identify workloads to migrate
- Sell with integrated pricing and ROI

HEALTHCHECK FOR AZURE LETS YOU:

Tier-1 Assess

Scans all of your customers' physical and virtual machines, calculate costs to move servers or workloads to Azure, and provides detailed reporting about each node.

Tier-2 Scan

Prepare for your migration by mapping dependencies between nodes and applications, determining the cloud readiness for each server, and choosing the right setting for a smooth migration.

HOW DOES HEALTHCHECK DO MORE?

- Agent-based approach provides deeper analytics
- Configurations are based on workload data instead of a snapshot in time
- HealthCheck for Azure has multiple plans and configurations to show best/worst case scenarios
- HealthCheck for Azure allows the ability to adjust SLTs, change regions, and offers capacity planning tools
- HealthCheck for Azure will optimize configurations based on performance needs rather than match to existing hardware
- MAP isn't designed specifically for cloud migrations
- HealthCheck for Azure allows for graphical representations of the data through the SaaS application in addition to reports

FEATURES	TIER-1 ASSESS	TIER-2 PLAN	MS MAP
Cloud modelling and assessment report	✓	✓	✓
TCO per workload, accurately project TCO in the cloud	✓	✓	
Performance Insights Analysis	✓	✓	
Informed Insights into Reserved Instance Purchases	✓	✓	
Multiple plan / configuration mappings	✓	✓	
Detailed Migration Strategy Plan		✓	
Application discovery and Migration planning and design		✓	
Architectural decision making		✓	
What-if analysis scenarios and infrastructure planning		✓
